

## **AACU Policy Stance Supporting the Use of Augmented Intelligence (AI) In Urology**

The American Association of Clinical Urologists, Inc. (AACU) is fully committed to supporting the use of augmented intelligence (AI) to assist urologists in improving patient care.

We understand that urology can be enhanced by this technology to help us execute tasks, make decisions and conduct faster complex analyses.

In doing so, the AACU will advocate for and help ensure that the tools utilizing augmented intelligence will be responsibly developed in an ethical, equitable, and transparent way.

We look forward to working with the house of medicine in exchanging best practices and insight on AI utilization.

Most importantly, the AACU will always reiterate its steadfast defense of having urologists practice urology; not have AI practice urology.
